

Exploiting NextMap Britain for NERC Science

Wednesday 21 September 2005
British Geological Survey, Keyworth

In early 2004, the high resolution NEXTMap Britain elevation dataset became available to NERC scientists. Since then, it has been used in over 50 projects in BGS alone, with other applications in CEH and in NERC research in the Universities. Eighteen months on, it is timely to assess progress now that NERC has purchased the remaining national coverage. A workshop is taking place at BGS Keyworth, with the aim of disseminating results of processing of NextMap data for NERC science projects and studentships.
